Panasonic Avionics Commits to Capacity of SKY Perfect JSAT's Superbird-C2 Satellite

- Enables Panasonic's in-flight service for commercial airlines to expand over Indian Ocean and Southeast Asia -

Tokyo, August 1, 2012, SKY Perfect JSAT Corporation (SKY Perfect JSAT) announced today that Panasonic Avionics Corporation (Panasonic) commits to the capacity on South East Asia beam on SKY Perfect JSAT's Superbird-C2 satellite, to be used to provide Panasonic's eXConnect service, in-flight Internet connectivity for commercial airlines from this autumn.

Panasonic is the world's leading provider of in-flight entertainment and communications systems and provides the exConnect, in-flight Internet connectivity service. The eXConnect service has been chosen by the world's major airlines for enabling passengers to enjoy high-speed Internet connectivity services when on the move at altitudes of 10,000 meters. The eXConnect service areas have been steadily expanding over the Pacific and Atlantic oceans, as well as other regions. In the latest development, Ku-band capacity on South East Asia beam of Superbird-C2 satellite has been selected for the eXConnect service. This move will expand the eXConnect service area to Indian Ocean and Southeast Asia and means that Internet access will be made available to passengers using wireless LAN by their smartphones, PCs and other devices while in-flight in these regions.

SKY Perfect JSAT is expanding satellite communication services to mobile vehicles such as vessels and aircrafts. From 2010, SKY Perfect JSAT has been providing "OceanBB", the maritime broadband service to vessels operated around the world. Looking ahead, SKY Perfect JSAT also intends to develop the market of in-flight Internet connectivity solutions, for which demand is projected to increase, as it presses ahead with business development to provide satellite communications services to aircraft worldwide.

About Panasonic Avionics Corporation

Panasonic Avionics Corporation is the world's leading supplier of in-flight entertainment and communication systems.
